Tips and techniques: Dry brushing, sponging, wash and salt are just a few of the techniques used to create various effects.

Dry brushing-A technique in which a paintbrush is used dry, but still holds paint, doing this creates coarse, scratchy textures like wood or grass. To achieve, load your brush up with paint then wipe off excess. Next, lightly drag your brush across your work surface.

Sponging-A technique commonly used to create trees, bushes, rocks, clouds and coarse texture. To achieve, use a natural sponge to pick up a little color off your palette. Then lightly dab your surface repeatedly in the area in which you are working.

Wash-A technique that results in a smooth, uniform area that lacks the appearance of brush strokes. To achieve, load your brush with paint. Start from one side of your painting and drag the color to the other side. Repeat one stroke under the other. You can produce gradient tones (dark to light) by adding water and less paint.

Salt-A dappled texture can be achieved by simply sprinkling a little table salt over a wet surface. Wait for it to dry, then brush away.
